DeltaV Operate Error: Module Description. This is an issue I've had (more a minor annoyance than anything) that I can't seem to solve. I'll bounce it around on the forum and see if anyone may have some advice on this. If I leave a faceplate open in DeltaV Operate for an undetermined amount of time (for the discussion, let's say about 5 minutes), a warning will pop up with the following message ...

## Deltav Operate Emerson | calendar.pridesource

There is no simple means to determine user security access via DeltaV Operate Scripts. In the cases where user name is used to determine OPERATE behavior (i.e. hide or show a button), it is typically done by having a short list of permitted users encoded in a script (or a short list of denied users), and you set that up manually.
