A rectenna is a rectifying antenna — a special type of receiving antenna that is used for converting electromagnetic energy into direct current electricity. They are used in wireless power transmission systems that transmit power by radio waves. A simple rectenna element consists of a dipole antenna with an RF diode connected across the dipole elements. The diode rectifies the

The material of solar rectennas is widely available in the form of thin films, and the fabrication process is inexpensive compared to conventional solar cells. Solar rectennas demonstrate versatility over PV devices by exceeding efficiency during the day.
