5) Astronomers believe that terrestrial planets in binary star system could not support advanced life. (hint: Dole (1964) estimated that the average amount of energy received by a planet not could vary by more than 10 % without affecting its habitability).

Lab Simulation Time: 40 Minutes Got To: [Https://ph ...](https://ph...)

When you have completed this lab you should be able to 1. visualize the proportions of the solar system--the sizes of objects and distances between them. 2. clearly and fully explain why it is warmer at the equator than it is at the poles. Lab Activity #1: Scale Model of the Solar System In this scale model, 1 mm in the model = 2000 km in real life.

Lab Activity #1: Scale Model of the Solar System

Solar Systems consist of Sun, Moon, Earth, Other planets and their moons, meteors, asteroids and comets. The Earth is the _____ planet from the sun. Third. The earth is about _____ km from the sun. 150 million. My Very Educated Mother Just Served Us Noodles ... can help you remember the planets in order from the sun ...

Solar System Flashcards | Quizlet

SCALE OF THE SOLAR SYSTEM Lab Instructions OBJECTIVE It is interesting and useful to see how far apart the planets are in the solar system and also compare their sizes. While you know the Sun is larger than any of the planets, it will be instructive to get a better feeling of its size and mass in comparison to the planets and other stars.

This question was created from Lab 4 Scale of the Solar ...

Solar System Scale Lab Purpose: The purpose of this lab is to measure the distance between the planets in our solar system by scaling down the size to fit on a field. Did all the planets fit on the field? If not how many planets were you able to show before ending?
